4	Slide Springs	DSP008M
4	Adjusting Washers	DW0001
4	E-clips	DE0001

STAGE ONE INSTRUCTIONS

Dynojet
E1194.001

1. Remove vacuum slides from carbs. Remove spring from slide. Thread one of the slide cover screws into the center of the needle retainer (Fig. A) and pull up gently. Remove stock needles and spacers, noting order of assembly (Fig. B).
2. Install Dynojet needles on groove #3 from the top. Use all stock spacers (Fig. B). Install the small Dynojet washers above the E-clip. Install the Dynojet slide spring (DSP008M) in place of the stock slide spring. After installing the slides in the carbs be sure to check slide movement manually.
3. Remove the stock main jets and replace with Dynojet main jets provided. If you are running the stock exhaust install the DJ110 main jets . If you are running an aftermarket exhaust or slip-on with a high flowing baffle, use the DJ114 main jets. Be sure that the jets you are changing are the main jets
4. Locate the fuel mixture screw (Fig. C). Carefully turn the screws clockwise until they lightly seat and then back out 2 1/2 turns or until the best idle is achieved.
